K-디지털 트레이닝

vue-router를 이용한 라우팅 1

[KB] IT's Your Life

KB국민은행

SPA(단일 페이지 애플리케이션: Single Page Application)

- 하나의 페이지 안에서 데스크톱 애플리케이션과 같은 사용자 경험을 제공
- 여러 화면을 하나의 페이지 안에서 제공, 화면을 별도로 로딩하지 않음

→ 화면마다 고유의 식별자(URI)를 기반으로 화면을 렌더링해야 함

- 요청한 URI 경로에 따라 각각 다른 화면이 렌더링되도록 함

→ vue-router 라이브러리 이용

createRouter()

- router 객체를 생성
  - URI와 이 경로를 처리할 컴포넌트 매핑

```
import { createRouter, createWebHistory } from 'vue-router'
...
const router = createRouter({
    history: createWebHistory(),
    routes: [
        { path: '/', component: Home },
        { path: '/about', component: About },
        { path: '/members', component: Members },
        { path: '/videos', component: Videos},
    ]
});
```

router 객체의 등록

```
const app = createApp(App)
app.use(router)
app.mount('#app')
```

<RouterView>

- 각 경로별 컴포넌트를 렌더링할 위치를 지정하는 컴포넌트

```
<template>
  <div class="container">
    <Header />
    <RouterView/>
  </div>
</template>
```

<RouterLink to="경로">

- 화면 전환 을 위한 링크 생성

<router-link to="[등록시킬 URI 경로]">[링크 텍스트]</router-link>

```
<RouterLink to="/">Home</RouterLink>
```

실습 프로젝트 생성

```
npm init vue router-test

작업할 프로젝트 컴포넌트 구조

부트스트랩5 설치

```
npm install bootstrap@5
```

page 컴포넌트 정의

- src/pages
  - Home.vue
  - About.vue
  - Members.vue
  - Videos.vue

  - name과 타이틀을 각 페이지마다 지정

```
<template>
    <div class="card card-body">
        <h2>Home</h2>
    </div>
</template>

<script>
export default {
  name : "Home"
}
</script>
```

src/router/index.js

```
import { createRouter, createWebHistory } from 'vue-router'

import Home from '@/pages/Home.vue'
import About from '@/pages/About.vue'
import Members from '@/pages/Members.vue'
import Videos from '@/pages/Videos.vue'

const router = createRouter({
    history: createWebHistory(),
    routes : [
        { path: '/', component: Home },
        { path: '/about', component: About },
        { path: '/members', component: Members },
        { path: '/videos', component: Videos },
    ]
})

export default router;
```

src/main.js

```
import { createApp } from 'vue'
import 'bootstrap/dist/css/bootstrap.css'
import App from './App.vue'
import router from './router'

const app = createApp(App)
app.use(router)
app.mount('#app')
```

src/components/Header.vue

```
<template>

컴포넌트에서 router 객체 접근하기

- this.$router
  - src/router/index.js에서 작성한 router 객체
  - 전체 라우트 정보 파악
  - push(), replace(), go() 등의 메서드 이용가능

- Router 관련 정보 접근

구분	Options API	Composition API
라우터 객체	this.$router	const router = useRouter()
매칭된 라우트 (currentRoute)	this.$route – 또는 – this.$router.currentRoute	const currentRoute = useRoute()

컴포넌트에서 router 객체 접근하기

currentRoute 객체의 주요 속성

구분	설명
fullPath	전체 요청 경로, 쿼리문자열까지 포함(ex: /about?a=1&b=2)
matched	vue-router 객체의 routes 배열의 라우트 중 매칭된 라우트
params	URI 경로에 동적으로 전달된 파라미터 정보, 자세한 내용은 다음 절(동적 라우트)에서 다룸
path	요청 URI 경로
query	쿼리 문자열 정보 ?a=1&b=2로 요청되었다면 this.$route.query는 { a:1, b:2 }와 같은 객체임
redirectedFrom	다른 경로에서 리디렉트된 경우 리디렉트시킨 URI 경로 정보를 포함

KB국민은행

src/pages/About.vue

```
<template>
    <div class="card card-body">
        <h2>About</h2>
        <p>요청 경로 : {{$route.fullPath}}</p>
    </div>
</template>

<script>
export default {
  name : "About",
  created() {
    console.log(this.$route)
  }
}
</script>
```

src/pages/Members.vue

```
<template>
    <div class="card card-body">
        <h2>Members</h2>
        <p>요청 경로 : {{currentRoute.fullPath}}</p>
    </div>
</template>

<script>
import { useRoute } from 'vue-router'

export default {
  name : "Members",
  setup() {
    const currentRoute = useRoute();
    return { currentRoute };
  }
}
</script>
```
